8

Proposals

1. Syntax-Phonology Mapping

(6) Interpret boundaries of syntactic constituents [...] as prosodic boundaries / ... /. *Linearization*

[[Alice] [[loves] [hamsters]]]

// Alice /// loves // hamsters ///

9

2. Boundary Deletion

(7) Delete n boundaries between words.
(n : a natural number) *Zoom-Out*

[[Alice] [[loves] [hamsters]]]

// Alice /// loves // hamsters ///

/ Alice // loves / hamsters // ($n=1$)

Alice / loves hamsters / ($n=2$)

Alice loves hamsters ($n=3$)

10

3. A Constraint on Boundary Deletion

(8) In a sentence (or paragraph), the number of boundaries to be deleted (n) should be as constant as possible. *Consistency*

[[Alice] [[loves] [hamsters]]]

// Alice /// loves // hamsters ///

?Alice loves / hamsters //

<- $n=3$ -> <- $n=1$ ---->

11

4. Avoid Pause

(9) A long pause in a clause should be avoided. *Continuity*

[Ken [gave [[a [book [about [small hamsters]]][to Alice]]]]]

[Ken [[gave [to Alice]] [a [book [about [small hamsters]]]]]]]

12

5. Consequences

- Bare phrase structure
- Speed of utterance
- Length/heaviness of constituents
- Prosodically motivated movement
- Given/new information
- Discourse structure
- Derivation and parsing

6. Thetic/Categorical Judgment *Cognition*

NSR (Cinque 1993)

47

Conclusion

- Linearization: Speakers map hierarchical syntactic structure onto PF with brackets and silence.
- Parsing: Hearers build hierarchical structure from PF including silence.
- Speakers can zoom out sentences by skipping boundaries between linguistic elements.
